1. Introduction

AECOM Technical Services, Inc. (AECOM) was contracted by the City of Meriden (City) to prepare this Interim Remediation Summary Report to document and summarize the remedial activities conducted to date at the property located at 177 State Street in Meriden, Connecticut (the Site). This interim phase of remediation included soil excavation, site-regrading, and off-site soil disposal. The overall site remediation will include capping the site with various features such as a building, paved parking areas and sidewalks, and rendering the remaining soil at the site inaccessible, as well as site monitoring and closure reporting. These initial remedial objectives were substantially completed between December of 2016 and February of 2017. A State of Connecticut Department of Economic and Community Development (DECD) grant was used to fund the initial phase of this project.

Site remediation will be conducted through the Connecticut Department of Energy and Environmental Protection (CT DEEP) Voluntary Remediation Program (VRP) under Connecticut General Statute (CGS) Section 22a-133x. As such, activities under this phase of work were conducted in accordance with the Connecticut Remediation Standard Regulations (CT RSRs, January 1996, rev. June 2013); Regulations of Connecticut State Agencies (RCSA) Section 22a-133k-1 through 22a-133k-3 and will be supported by the Environmental Land Use Restriction (ELUR) regulations, RCSA Section 22a-133q-1.

For this initial phase of work the remedial alternative was developed for the site with consideration for:

1. Protection of human health and the environment by remediation of soil in accordance with the CT RSRs, and;
2. Potential site re-use and redevelopment considerations as a mixed-use commercial and multi-family housing development.

The interim remediation activities satisfy the objectives. A general overview of the remedial activities completed during this initial phase included:

1. Soil excavation and off-site disposal for soils and/or urban fill that exceed specific RSR criteria.
2. The Site was graded to as-built specifications identified on the plans after the removal of existing asphalt, which was transported off-site to an industrial stone distribution facility. Excess material generated from on-site grading activities was used to backfill areas where impacted soils were excavated. The remaining excess soil generated during on-site grading operations was transported to approved receiving facilities located in Connecticut and Massachusetts.
3. Soil exceeding GB PMC was removed from the site.

Details regarding pertinent site history and specific tasks and procedures associated with this project are provided herein.

1.1 Site Setting and History

The subject property is owned by the City and consists of a 1.24-acre parcel that was used as a parking area. A fence was located on the property, to partition the site into two separate parking areas. There are no other structures located on the site. The site slopes gently to the south, toward Harbor Brook. A Site Location Map is included as **Figure 1**.

The site has reportedly been used as a parking area since approximately 1963. Prior to 1963, the site included four separate parcels having various uses dating back to the late 1800's. The former northern and eastern parcels included residential properties. The former western and southwestern parcels included a newspaper publishing company, an automotive repair business, a painting and carpentry shop, a blacksmith, and a carriage works.

The site is located in a mixed residential and commercial area of Meriden. The site is abutted to the north and east by Cedar Park, a recreation area, beyond which are Park Street to the North and Cedar Street to the East. The site

is abutted to the west by State Street, beyond which are commercial properties. The site is abutted to the south by a paved parking area and multi-family residential properties, beyond which is Mill Street.

1.2 Site Geology and Hydrogeology

According to the Bedrock Geological Map of the Meriden Quadrangle of Connecticut (USGS, 1985), bedrock beneath the site is identified as New Haven Arkose, a coarse-grained, poorly-sorted red sandstone deposited between the Jurassic and Triassic. According to maps available on the Connecticut Environmental Conditions Online (CT ECO) website, surficial materials in the area of the site include sands overlying fine-grained sediments, indicated as proximal stream meltwater deposits.

Based on previous investigations, overburden materials at the site consist of fine to coarse-grained sand and silt from grade to approximately 12 feet below the ground surface (bgs). Urban fill materials, described as fine to coarse-grained sand and silt with gravel and brick fragments, were also observed in soil borings across the site from grade to approximately 5 feet bgs, with well graded sand and gravel observed from approximately 5 to 12 feet bgs.

Groundwater was encountered at approximately 6 feet bgs on the southeastern portion of the site and approximately 9 feet bgs on the northwestern portion of the site. Based on local topography and surface water features in the area of the site, groundwater flow is expected to be to the south or southeast towards Harbor Brook.

The CT DEEP classification for the groundwater in the vicinity of the site is GB, which is defined as groundwater that is presently known or presumed to be degraded due to historical land use practices and is not suitable for human consumption without prior treatment (Water Classification Map of Connecticut, CT DEEP, 2013). Two public water supply wells exist within a 1 mile radius of the site which are owned by the Meriden Water Division. The Columbus Park Well is located approximately 0.5 miles northwest of the site, and the Britannia Street Well is located approximately 0.85 miles north-northwest of the site.

The nearest surface water body is Harbor Brook, which runs through the Meriden Green about 200 feet southeast of the site. This brook is classified as "B, B*", according to the CT DEEP Water Quality Classifications Map, 1993. A "B, B*" classification indicates the water is known or presumed to meet criteria for uses such as industrial water supply, aquatic habitat, recreation and navigation.

1.3 Remediation Criteria and Constituents of Concern

RCSA Sections 22a-133k-1 through 22a-133k-3, inclusive, comprise the RSRs. These regulations are applicable to various sites in Connecticut including those undergoing investigation and remediation under the Property Transfer Program, under an administrative order from the CT DEEP, or enrolled in the CT DEEP VRP. Applicable RSR criteria are summarized below.

The presence of a number of Constituents of Concern (COC) include Extractable Total Petroleum Hydrocarbons (ETPH), polycyclic aromatic hydrocarbons (PAH), and metals (antimony, lead, arsenic and mercury) that exceed one or more RSR criteria. Applicable soil remediation criteria for the site include the GB Pollutant Mobility Criteria (PMC) to prevent further degradation of groundwater quality from soil impacts, and the Residential Direct Exposure Criteria (R DEC) to prevent exposure to soil impacts which are potentially accessible.

Groundwater at the site has been designated as GB quality, indicating that it is not suitable for consumption without prior treatment. Applicable remediation criteria for groundwater at the site include the Surface Water Protection Criteria (SWPC) for protection of surface water resources which are potential receptors for groundwater and the Residential Volatilization Criteria (RVC) for protection of indoor air quality from volatile constituents in groundwater beneath buildings.

The CT RSRs include a requirement to remediate to GA criteria in GB areas where groundwater is a drinking water resource (i.e. used for drinking). Because the nearest water supply wells are located greater than 500 feet from the site and public utility water is available in the area of the site, this requirement is not applicable for this site.

The next phase of development will be utilized to complete site soil remediation efforts by rendering soil inaccessible through the use of a building and other hardscape features to achieve compliance with the CT RSRs R DEC. Additional remedial activities will include obtaining an Environmental Land Use Restriction (ELUR) to prevent disturbance of the surface cover material and soil materials beneath the cap. The City will be responsible for placement of the ELUR on the land records.

1.4 Conceptual Site Model

Environmental investigations have been conducted at the site by AECOM and others. The results of the previous investigations including their sources and mechanisms of release have been summarized in the conceptual site model (CSM) and previous investigations sections within the Remedial Action Plan (RAP, 2016).

The results of the previous environmental investigations identified one location (SB-103) where concentrations of lead exceeded the GB PMC in soil 2 to 4 ft bgs. The lead concentrations in the soil in this location, designated Area A, had the potential exposure pathway that could facilitate the mobility of pollutants through precipitation infiltration through the soil. In a second location (SB-102), designated Area B, metals were detected in soil at concentrations above the R DEC (lead) at 4 to 6 ft bgs and in groundwater above the SWPC (arsenic). Although no exceedances of the GB PMC were detected, the metals detected in groundwater provided sufficient enough evidence to suggest that soil impacts may have been migrating into groundwater.

In compliance with RCSA Section 22a-133k-1 through 3, these soils required remediation to prevent further migration of pollutants and potential degradation of groundwater quality from soil impacts. As described in the RAP, the selected remedial action was excavation and off-site disposal for soils that had the potential to be mobile and/or further degrade the groundwater quality. The remediation activities are described in further detail in the sections below.

In the remaining site soils, the presence of urban fill was detected during previous environmental investigations. ETPh, PAHs, and metals were detected in each of the nine soil sample locations investigated across the site which is consistent with characterized urban fill. Five of the nine locations had detections of these compounds at concentrations above the R DEC.

In compliance with RCSA Section 22a-133k-1 through 3, these soils required remediation since there is pathway for the potential for direct exposure of these compounds via dermal contact and ingestion. As described in the RAP, compliance for these soils with the CT RSRs will be achieved by rendering the site soil inaccessible and environmental isolated. Future redevelopment activities that include the construction of buildings/foundations and an asphalt parking lot will provide environmental compliance when constructed in accordance with RSR Section 22a-133k-1(a)(32)(C).

2. Remediation Planning

The soil remediation activities were completed in accordance with the RAP and in compliance with the CT RSRs Sections 22a-133k-1 through 3. A description of the activities planned and completed to date is described below.

2.1 Project Team and Funding

The remediation project team, along with their roles and responsibilities, included the following.

- City of Meriden – Owner
- Pennrose Properties, LLC – Developer
- AECOM – Environmental Manager
- Connecticut Tank Removal, Inc. (CTR) – Prime Contractor

Plans and specifications for remediation and grading at the Site were developed by AECOM. Implementation of this project included environmental remediation activities in support of the site redevelopment. AECOM prepared and

submitted a RAP, along with plans and specifications related to environmental remediation pertaining to the project design. Additionally, AECOM is providing the CT Licensed Environmental Professional (LEP) of record for this project. The LEP of record is responsible for ensuring environmental remediation will be completed at the site in accordance with the CT RSRs. This includes LEP verification at the completion of environmental activities associated with the completed site. AECOM provided environmental remediation support services for this phase of the project including review of the contractor's environmental submittals, management of environmental soil remediation, along with related documentation.

CTR served as the remediation contractor that conducted the work during this initial phase to facilitate the construction associated with the environmental remediation activities where applicable. Activities managed by CTR included waste characterization sampling, waste determination and profiling, facility coordination for soils to be shipped off-site for disposal and air monitoring.

In addition, there were a number of funding agencies that contributed via various grants including the DECD and CT DEEP. The DECD awarded funding totaling \$597,000 for remediation of the site. The State agencies provided regulatory overview and routine project oversight of funding.

2.2 Health and Safety

AECOM and CTR both prepared their own site specific Health and Safety Plan (HASP) to meet the requirements of 29 CFR 1910.120. All work was conducted in accordance with the HASP and covered each company's employees. Soil remediation work was conducted by personnel that held current 40-hour Hazardous Waste Operations and Emergency Response Standard (HAZWOPER) OSHA training certificates.

2.3 Permits and Approvals

This project was conducted under the direction of a Connecticut LEP and all work was conducted in accordance with the CGS 22a-133x (the VRP). CT DEEP approval of the proposed activities was not required as this is an LEP-led site under this regulation. An ELUR is required as part of the self-implementing remedial options to render the materials beneath the site inaccessible in accordance with the 2013 revisions to the RSRs Sections 22a-133k-1 through 22a-133k-3 of the RCSA as well as to prohibit disturbance of the underlying impacted materials.

Registration for the CT DEEP General Permit for Contaminated Soil and/or Sediment Management (Staging and Transfer) was not required during performance of the remediation activities. This permit is only required when the volume of impacted material stockpiled on the site exceeds 1,000 cubic yards for a period of 45 days or greater, or if construction activities require the staging of greater than 10 cubic yards of impacted soil excavated from the property on some other parcel.

A Flood Management Certification (FMC) was prepared, submitted to, and approved by the DEEP prior to the work being contracted. This was a requirement of the State DECD funding source because the remediation activities were proposed within a floodplain. The FMC application (No. FM-201610538) was approved by the Commissioner of the DEEP on November 23, 2016. The complete application was included as an attachment to the remediation contractor bidding documents.

2.4 Public Notification and Community Outreach

In accordance with the CT RSRs and the VRP public notice for these remedial activities was required. To satisfy the VRP, the public notification process was conducted in accordance with CGS Section 22a-134(a)(h)(2)(i) and CGS Section 22a-133x.

This process included a requirement for public notice of remediation activities placed in a local newspaper and notification to the Director of Public Health for the City, both of which were completed. Additionally, a sign was placed at the site which was visible from the road and stated that an environmental clean-up was in progress at the site. The sign was visible from State Street. In accordance with the referenced General Statute, the sign was not less than six

feet by four feet, clearly visible from the road, and included a name and telephone number of a person able to provide additional information about the project.

3. Sampling and Analysis Plan

The remediation activities included post-excavation and waste characterization sampling. Appropriate sampling protocol requirements, laboratory analysis and quality assurance/quality control measures were followed as described within the RAP (AECOM, 2016).

All laboratory analyses were performed by Complete Environmental Testing, Inc. (CET) located in Stratford, CT. In accordance with the requirements set forth in the RAP, CET is a laboratory certified to perform the required analysis in the State of Connecticut.

3.1 Post-Excavation Sampling

Post-excavation verifications samples were collected by the remediation contractor and analyzed to ensure that 1) remaining material did not exceed GB PMC and 2) to verify that no additional excavation of remaining soil was required to comply with the CT RSR. The post-excavation soil sampling methodology was provided in the RAP (AECOM, 2016).

3.2 Waste Characterization Sampling

Waste characterization sampling was completed by CTR under the direction and supervision of AECOM when necessary to supplement existing information and data for the purposes of satisfying the requirements of the disposal facility. Sampling frequency and analytical parameters/procedures were performed in accordance with the disposal facility requirements. Waste characterization samples were submitted under chain of custody for laboratory analysis.

4. Site Remediation Activities

The remedial approach for this interim remedial action included 1) removal of soil from two pre-identified locations, Excavation Area A and Excavation Area B, as described in the above CSM Section 1.4 and 2) re-grading the site in preparation of the future placement of an asphalt parking lot and building in order to achieve compliance with the CT RSRs. The conceptual remedial approach to address soil impacts includes the elements described below.

4.1 Remedial Program Elements

4.1.1 Sedimentation and Erosion Control

Prior to the remediation activities, an erosion and sedimentation control system (silt fence) was installed. This included silt fence around the perimeter of the site and catch-basin protection. To prevent off-site migration of materials, all equipment was decontaminated prior to leaving the site and work was not performed during heavy precipitation events. An anti-tracking pad was installed at the entrance/exit and utilized throughout the duration of the project. Erosion control measures were repaired on an as needed basis throughout the duration of project activities. Site erosion and sedimentation controls were installed and maintained in accordance with the 2002 Connecticut Guidelines for Soil Erosion and Sediment Control. As the project progressed and at completion areas were re-graded to promote drainage based on the location of sediment and erosion controls. Photographs of the sedimentation and erosion control measures that were installed can be found in the photograph log in **Appendix A**.

4.1.2 Dust Control and Air Monitoring

To minimize the potential for the COCs at the site being released in particulate form during site activities, dust control measures were implemented periodically during intrusive activities, if dust was observed or real-time monitoring results approached action levels during remedial activities. Throughout the remediation activities air monitoring was performed by the contractor in compliance with their project health and safety requirements to monitor the total dust

and particulate emissions at the site during remedial activities. A photo of the compliance perimeter air monitoring stations is provided in the photograph log in **Appendix A**.

4.1.3 Site Security and Traffic Control

Temporary fencing was used at the property to provide security during remediation activities. Temporary fencing was placed along the entire perimeter of the site and maintained for the duration of the project. A set of swing gates was installed at one location for the duration of the project to control traffic entering and exiting the site. A Site trailer for CTR was located at this entrance location. The swing gates were locked each night. Signage was also used to alert the public to the site conditions, the nature of the project activities and to provide contact information. This signage included the standard sign required by CGS 22a-134 a – e, as well as City of Meriden public outreach signs showing the general public to contact the City for more information, if interested. A photo of the site security and traffic control measures are provided in the photograph log in **Appendix A**.

4.2 Soil Remediation

Based on the results of the previous investigations discussed above, the following soil remediation activities were completed:

1. Site soils were excavated from two hot spot areas, Excavation Area A (SB-103) and Excavation Area B (SB-102). These soils were removed from the site and disposed of off-site to eliminate the potential exposure pathway to pollutant mobility.
2. Excess site soils were excavated and disposed of off-site to facilitate the final design site grade.
3. Soils remaining onsite were re-graded in preparation of the placement of an asphalt parking lot and buildings.

A detailed description of each of these activities is provided in the sections below.

The RAP specified the removal of soil at these locations by means of 10-foot by 10-foot area excavation extent down to the water table. The final limits of the excavation extents were determined based on post-excavation sampling and comparison to the applicable criteria set forth in the CT RSRs. The post-excavation sampling procedure and results are discussed in the sections below. The remediation excavation extents are displayed on **Figure 2**.

The remainder of the property was re-graded in preparation of the placement of an asphalt parking lot and mixed-use residential and commercial building as part of redevelopment activities. The placement of the parking lot provides remediation compliance with the CT RSRs by rendering the remaining site soils inaccessible and environmental isolated. Site re-grading consisted of the excavation and offsite disposal of soil from the entire property. These activities are described in further detail in the sections below.

4.2.1 Excavation Area A - SB-103

The SB-103 Excavation Area activities occurred on January 12, 2017. A 10 ft by 10 ft area was excavated for exceedances of lead around former soil sample SB-103 and to the depth at which the groundwater table was observed, approximately 9 feet bgs. Once each area was initially excavated, the excavated soil was immediately loaded and transported/disposed of off-site. The excavation areas were then lined with temporary polyethylene sheeting and backfilled with previously identified non-hazardous soil while verification samples were analyzed and confirmed below the CT RSRs.

Post-excavation verification soil samples were collected on January 12, 2017 at a depth of 2 to 4 ft bgs from each sidewall and at the base of the excavation. The samples were analyzed for Toxicity characteristic leaching procedure (TCLP) and Synthetic Precipitation Leaching Procedure (SPLP) lead. Using the SPLP lead analysis, the analytical data identified no exceedances of CT RSR criteria, and therefore CTR was notified on January 16, 2017 that the SB-103 Excavation Area was complete and cleared for final backfilling operations. Final take-off measurements of the excavation limits and depths were provided by the contractor.

Field records including photograph logs can be found in **Appendix A**. A summary of the analytical laboratory data of the post-excavation samples are provided in **Table 1** and the complete laboratory analytical reports are provided in **Appendix B**.

The soil excavated from the SB-103 area was sampled and characterized for off-site waste disposal. Based on a review of the waste characterization sampling results, a hazardous determination was made. The soil excavated from SB-103 (68.57 tons) was shipped as hazardous waste to the Republic Environmental Systems, LLC facility in Hatfield, PA on January 12, 2017 for disposal in accordance with the facility material acceptability protocol. The management and disposal of this soil is discussed in more detail in Section 5.2 below.

4.2.2 Excavation Area B - SB-102

The SB-102 Excavation Area activities occurred on January 19, 2017. A 10 ft by 10 ft area was excavated for arsenic and lead around former soil sample SB-102 and to the depth at which the groundwater table was observed, approximately 7 feet bgs. Post excavation soil samples were collected on January 19, 2017 at a depth of 4 to 6 ft bgs from each sidewall and at the base of the excavation. The samples were analyzed for total arsenic, SPLP arsenic, total lead, and SPLP lead. The analytical data identified no exceedances of CT RSR criteria, and therefore, CTR was notified on January 20, 2017, that SB-103 was complete and cleared for backfilling operations.

Field records including photograph logs can be found in **Appendix A**. A summary of the analytical laboratory data of the post-excavation samples are provided in **Table 1** and the complete laboratory analytical reports are provided in **Appendix B**.

The soil excavated from the SB-103 area was sampled and characterized for off-site disposal. Based on a review of the sampling results, a non-hazardous determination was made. The soil excavated from SB-103 (58.98 tons) was shipped as non-hazardous waste to the Town of Manchester Sanitary Landfill in Manchester, CT on January 19, 2017 for disposal in accordance with the facility material acceptability protocol. The management and disposal of this soil is discussed in more detail in Section 5.2 below.

4.2.3 Site-Wide Excavation and Re-Grading

Following the excavation and disposal of the SB-103 and SB-102 Excavation Areas, the remaining site soils were excavated and graded to achieve the proposed site grading plans in preparation for the placement of pavement and buildings. The final as-built drawing depicting the final site grade prior to the placement of the parking lot is provided as **Figure 2**.

The excess site soils that were to be removed from the site to achieve the design site grade were sampled and characterized for off-site disposal. Based on the sampling results a non-hazardous determination was made. The management and disposal of this soil is discussed in more detail in Section 5.2 below.

4.3 Construction of Temporary Site Stormwater Drainage

In addition to the removal of contaminated soil related to remediation, a temporary stormwater drainage ditch was constructed and an associated outlet pipe was installed to facilitate drainage of the site during remediation and prior to the placement of future site features. Activities associated with the stormwater drainage ditch construction included the following:

1. The excavation of a trench 150 feet long;
2. Placement of bedding materials including aggregate and sand;
3. Placement of 150 feet of 15-inch High Density Polyethylene (HDPE) stormwater piping; and
4. Rehabilitation and resetting of the existing catch basin at the western end of the stormwater pipe as shown on the final as-built drawing on **Figure 2**.

Photos of the installation of the temporary site stormwater drainage system are provided in the photograph log in **Appendix A**.

5. Waste Management and Disposal Documentation

Several waste streams were generated during remedial activities at the site. The following presents a summary of the waste streams and the management processes utilized.

5.1 Asphalt

The pre-existing asphalt pavement was removed and disposed of offsite. Asphalt removal and disposal was completed between December 27, 2016 and January 18, 2017 over the entire footprint of the property. A total of 801.8 tons of asphalt was removed by CTR and sent to the Tilcon Connecticut Inc. facility in Wallingford, Connecticut to be recycled.

5.2 Soil

A total of 4,197.71 tons of soil was excavated and removed from the site. Prior to being transported off-site, wastes were properly characterized and profiled for disposal. Waste disposal was reviewed and approved by AECOM and the intended facilities confirmed their acceptance of the waste prior to transport. Wastes were disposed of at facilities permitted to accept such wastes.

Based on the waste characterizations sampling results, 4,129.14 tons of soils were disposed of as non-hazardous waste. Non-hazardous waste was disposed of at multiple facilities due limitations of the facilities on the volume of waste they could accept. Approximately 1,399.08 tons of soil was disposed of off-site at the Town of Manchester Sanitary Landfill and approximately 2,671.08 tons of soil was disposed of off-site at the Dudley Reclamation Site in Dudley, MA.

A total of 68.57 tons were disposed of as hazardous waste as described in Section 4.2.1 above. Hazardous soil was disposed of at the Republic Environmental Systems, LLC facility in Hatfield, PA on January 12, 2017.

In accordance with the FMC, all soils that were excavated and removed off-site were directly loaded into trucks and transported directly to the disposal facilities. Waste removal from the site was documented by manifests or bills of lading. The City of Meriden was named as the generator of the waste and a representative of the City signed waste profile forms and manifests. The waste disposal subcontractor prepared disposal manifests or bills of lading and documentation for the City's use. The waste disposal documentation discussed throughout this section is included within **Appendix C**.

Following the excavation and disposal of the soil described above, the remaining soil from the site was relocated and reused on-site to achieve the final site design grade. The final site grade as-built drawing is included at **Figure 2**.

6. Current Conceptual Site Model

As of February 2017, the potential exposure pathways related to pollutant mobility that might be caused by precipitation infiltrating through soil were eliminated by the removal of soil from the site that exceeds GB PMC. Potential direct exposure pathways of dermal contact, ingestion, and inhalation currently remain on site in soils with concentrations of COCs exceeding the R DEC. Remaining site soils will be rendered environmental isolated and inaccessible with site features to be constructed in the future. Future site features that will achieve environmental compliance with the CT RSRs include the construction of an asphalt parking lot and building foundations. Based on a review of the redevelopment design drawings, the design and thickness of the asphalt parking lot as well as the location of the building/foundations meet the requirements of a surface cover to achieve compliance with the CT RSRs for any polluted soils left on the property. Upon completion of the soil remediation and redevelopment of the site, the significant exposure and migration pathways described in the RAP will be eliminated.

An ELUR will be recorded on the land records to provide an administrative mechanism to prevent disturbance of soils beneath the pavement and maintain the proposed building over the inaccessible soils. If site disturbance is required, the City will request a temporary release of the ELUR and will provide soil management plans to CT DEEP.

7. Future Project Closure

Following the construction of the asphalt parking lot in compliance with the RSR Section 22a-133k-1(a)(32)(C), and the construction of the buildings/foundations on the 177 State Street property, it is anticipated that the soil conditions at the site will be in compliance with the CT RSRs. Compliance with the CT RSRs will be verified and documented in a Remedial Action Report. A RAR will be prepared summarizing pertinent investigation and remediation activities at the site and submitted to the CTDEEP. The RAR will include the final CSM for the site including pertinent findings, confirmation that investigation activities were completed in accordance with prevailing standards, including the CTDEEP Site Characterization Guidance Document, a discussion of receptors, and a description of all means and methods used to determine compliance with the RSRs. The RAR will also include plans for post-remediation groundwater monitoring and any monitoring or maintenance activities associated with the ELUR for the site.

Abbreviations

NS - Not Sampled

NA - Not Applicable

ND - Not detected at or above the specified detection limit

<90 - Not detected above given laboratory reporting limit

mg/kg - milligram per kilogram

ug/L - microgram per liter

ft bgs - feet below ground surface

SPLP - Synthetic Precipitation Leaching Procedure

TCLP - Toxicity Characteristic Leaching Procedure

Notes

1. All detections are bolded

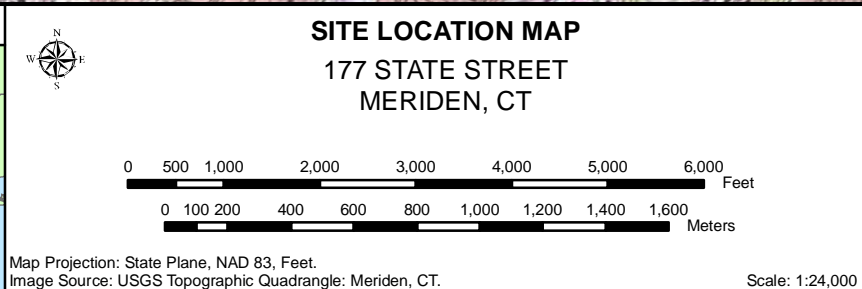

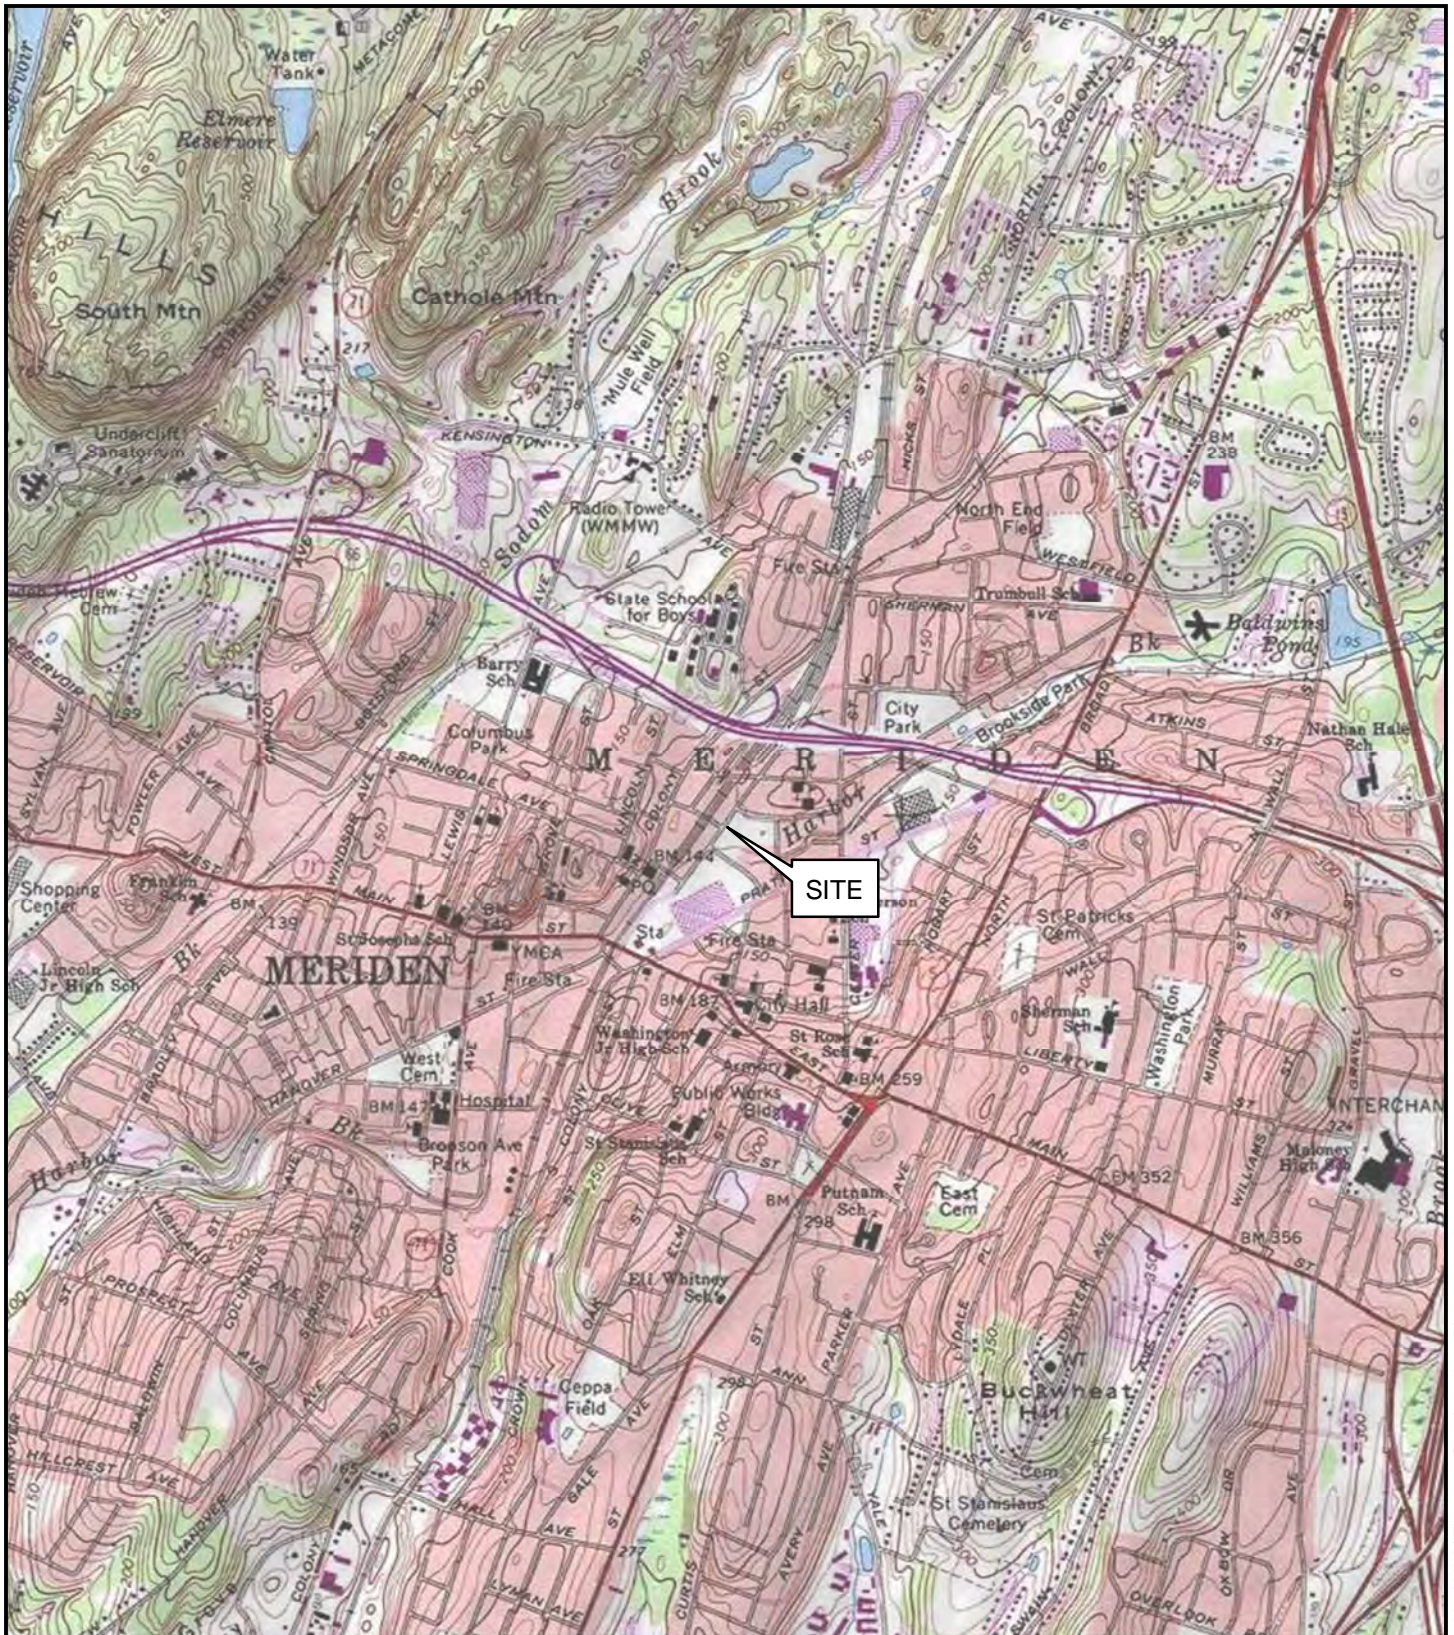

2. Concentrations above the R DEC are shaded blue

3. Concentrations above the GB PMC and the R DEC are shaded red

CASE NARRATIVE

Revision: Original report dated 01/13/2017, re-analyzed TCLP Lead for Sample 7010200-03 per client request.

All questions related to this report should be directed to David Ditta, Timothy Fusco, or Robert Blake at 203-377-9984.

Sincerely,

David Ditta
Laboratory Director

This technical report was reviewed by Timothy Fusco

Project Manager

Report Comments:

Sample Result Flags:

- E- The result is estimated, above the calibration range.
- H- The surrogate recovery is above the control limits.
- L- The surrogate recovery is below the control limits.
- B- The compound was detected in the laboratory blank.
- P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
- D- The RPD between the sample and the sample duplicate is high. Sample Homogeneity may be a problem.
- +/- The Surrogate was diluted out.
- *C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
- *C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
- *F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
- *F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
- I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at or above the specified detection limit

All analyses were performed in house unless a Reference Laboratory is listed.

Samples will be disposed of 30 days after the report date.

THANK YOU
Have a nice Day

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale.
All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. **All sales are final.**

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale.
All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. **All sales are final.**

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

THANK YOU
Have a nice Day

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale.
All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. **All sales are final.**

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. All sales are final.

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.

THANK YOU
Have a nice Day

In consideration of your making delivery off highway, the signee agrees to be responsible for all damages. In addition, the responsibility and ownership of materials belongs to consignee when loaded on truck. The seller makes no warranties, express or implied to buyer beyond point of sale. **All sales are final.**

Full payment due on the presentation of invoices. Finance charge of 1 1/2% per month (18% per annum) on all accounts 30 days past due. In addition, in the event that collection activity is required, buyer shall be responsible for all costs of collection, including attorney's fees. A \$30.00 fee will be added to any invoice that is paid by checks.
